XP Pro E
USER GUIDE

GENERAL INFORMATION

Congratulations on your purchase of the Sonim XP Pro E mobile phone! This phone is an ultra-rugged 5G smartphone featuring an intuitive, feature-rich user interface that enables you to make the most of the device's functions.

Durable Design

The Sonim XP Pro E is engineered for ultra durability, featuring IP68 and IPX9K ratings that certify its resistance to dust and water. This means the device can be submerged in up to 2 meters (6.56 feet) of fresh or salt water for 1 hour without sustaining damage, making it ideal for harsh and unpredictable environments. It also meets the rigorous MIL-STD-810H military standard, ensuring resilience against extreme conditions such as drops from up to 1.5 meters (4.92 feet), shock, vibration, temperature fluctuations, and is resistant to salt fog, enhancing its suitability for maritime or coastal environments¹.

Device Models Covered

This user guide covers the **Sonim XP Pro E** (model number X802) and Android 14 software.

DISPOSAL OF OLD ELECTRICAL AND ELECTRONIC EQUIPMENT

The symbol of the crossed-out wheeled bin indicates that this product and any enhancements marked with this symbol cannot be disposed of as unsorted waste; instead, they must be taken to separate collection for end-of-life disposal.

GETTING STARTED

How To Use This Guide Effectively

Familiarize yourself with the terminology and symbols in the guide to help you use your phone effectively.

HOME SCREEN	This is the screen displayed when the phone is in standby mode.
TOUCH AND HOLD	Touch and hold an item on the screen by touching it and not lifting your finger until an action occurs.
DRAG	Touch and hold an item for a moment, and then, without lifting your finger, move your finger on the screen until you reach the target position.
SWIPE OR SLIDE	Quickly move your finger across the screen's surface, without pausing when you first touch. For example, you can slide a home screen left or right to view the other home screens.
DOUBLE TAP	Tap quickly twice on a web page, map, or other screens to zoom.
PINCH	In some applications, you can zoom in and out by placing two fingers on the screen simultaneously and pinching them together or spreading them apart.

Charging the Battery

The battery delivered with your mobile phone is not fully charged. We recommend fully charging your phone before first use.

Optimal Charging Temperature Guidelines

For best battery performance and longevity, charge your smartphone within these temperature ranges:

- Acceptable charging temperature: 0°C to 45°C (32°F to 113°F).
- Optimal charging temperature: 20°C to 30°C (68°F to 86°F).

When battery temperature rises above 45°C (113°F), two negative effects occur:

1. Battery lifespan is reduced.
2. Charging speed automatically slows down to protect the battery (fast charging naturally produces more heat, pushing your device into higher temperatures).

A USB fast-charging wall charger is required. For the fastest charging speed, the charger should be capable of delivering 18 Watts*. (A minimum of 10 Watts (5V DC and 2A) is required, but this will result in slower charging.)

NOTE: Only the power supplies with outputs that meet the Safety Extra Low Voltage (SELV) requirements² can be used for charging. The phone will only allow a maximum input voltage of 9V DC and 2A.

***NOTE:** Using a PD (Power Delivery) charger with more than 18 Watts of power is acceptable, but does not provide additional benefits.

² SELV (Safety Extra-Low Voltage) chargers are designed to ensure user safety by limiting the voltage and providing electrical isolation. Markings on the charger, indicating compliance, vary depending on the country or region in which it is intended for sale and use. Some common logos include "CE", "UKCA", "FCC", "Intertek", or "CSA". Typically, there is also a logo of a square within a square (□), which indicates the wall charger is double-insulated and does not require grounding.

NOTE: If the battery is fully discharged, the charging icon may take several minutes to appear after the charger is connected.

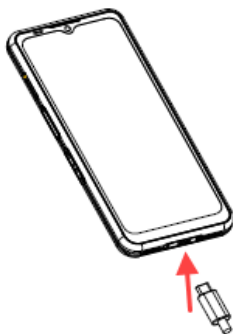

1. Insert the charger

Insert the charger plug into a power outlet

2. Connect to the phone

The charging port is located at the bottom of the phone and is covered by the rubber charging port cap.

- i. Open the charging port cap.
- ii. Insert the charging connector.

Charging Animation/Icon

- If the battery is charged when the phone is switched off, a battery charging animation with the current battery level is displayed.
 - After the battery is fully charged, the charging animation stops, and the battery level displays 100%.
 - Please disconnect the charger from the phone.
- If the battery is charged while the phone is switched on, the battery icon on the status bar shows the lightning bolt, indicating that the battery is being charged.
 - After the battery is fully charged, the display shows “100%” next to the battery.
 - Please disconnect the charger from the phone. Once unplugged, the battery icon will return to a solid image.

Inserting SIM And SD Storage Cards

The SIM (Subscriber Identity Module) card associates your network services (for example, phone number, data services, etc.) with your phone. The Sonim XP Pro E device comes with a hybrid tray that supports (4th Form Factor) 4FF SIM cards and Memory card trays.

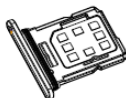

Insert a SIM card

Your Sonim XP Pro E does not come with a pre-installed SIM card. To install/replace a SIM card, first, power down the phone:

NOTE: The XP Pro E has a dual-sided 4FF SIM tray. Insert your nano-sized SIM card into the SIM tray. If applicable, a second SIM card can be placed on the underside of the tray.

- 1. Pull out SIM tray:** Insert the Sonim SIM tool into the SIM tray hole to pop out the tray.
- 2. Place the SIM On The Tray:** Insert the SIM card with the gold contacts up on the tray.
- 3. Gently Push In The Tray:** Gently push the SIM tray into the phone slot.

CAUTION: Any abrasion or folding could easily damage the SIM card, MicroSD card, or SIM card tray; therefore, please handle them with extreme care.

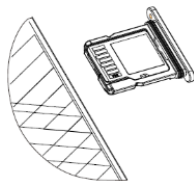

Insert a MicroSD card

To access the MicroSD card slot, use your Sonim SIM tool to pull out the SIM/Micro SD card tray. Notice that with the phone facing up, the SIM primary tray is located on the top-facing side, and the underside tray can accept either a MicroSD card, as illustrated below, or a second SIM card (turned 90° sideways).

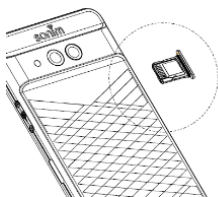

- 1. Pull Out SIM Tray:** Insert the Sonim SIM tool into the SIM tray hole to pop out the tray.

- 2. Place The MicroSD On The Tray:** Insert the MicroSD card on the tray with the gold contacts facing up (opposite side of the SIM tray).

- 3. Gently Push In The Tray:** Place the phone face down and reinsert the SIM tray back into the slot. Please continue to the chapter, STORAGE SETTINGS, for instructions on how to manage the SD memory card through the phone.

Switching On The Phone

Press and hold the **Power** button for 2 seconds to turn **ON** your phone.

When the phone is switched on, it tries to register with the network.

After successful registration, the service provider's name is displayed at the top left of the status bar.

NOTE: Ensure a valid SIM card is activated, or your device will not work correctly on the network.

Switching Off The Phone

By default, in Android 14, the Power button is set to activate your Digital Assistant.

- If you prefer to set your power button to access the power menu, then go to **MAIN MENU > SETTINGS > SYSTEM > GESTURES > PRESS & HOLD POWER BUTTON >** select **POWER MENU**.
- If you still want easier/faster access to the Digital Assistant, you can use **PROGRAMMABLE KEYS** to set the “Assistant” application as the action of either the Push to Talk key or the Emergency Key.

Method #2 for turning off the phone

1. Swipe down on the Status bar to open the Notification panel.
2. Swipe down again and locate the power button icon at the bottom of the screen.
3. Tap the power button and make a selection from the following options: Emergency, Lockdown, Power off, and Restart.

Phone Operations Without SIM Card

You can perform the following operations without a SIM card in your phone:

- Make an emergency call
- View & modify all settings except data usage and mobile network-related settings
- Activate and share files through Bluetooth
- Access the Internet using Wi-Fi connectivity
- Access your phonebook, File Explorer, multimedia files & all tools and applications
- View and modify your profile settings

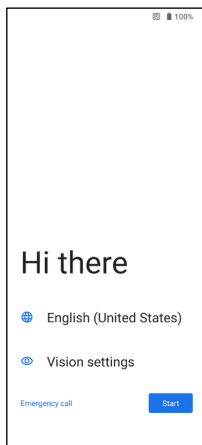

Setting Up Your Phone

Follow the steps below to set up your device. For more information, follow the instructions displayed on your device screen.

1. When you turn on your device for the first time, this screen is displayed. Follow the prompts to complete the setup process.
2. Tap on **START** and the following screen is displayed.

You have two options:

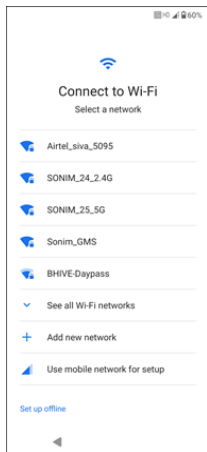

- Copy your data
- Set up as new

3. Tap on **Set up as new**, and the **Connect to Wi-Fi** screen is displayed. The device will start checking for updates.

4. Connect to a network to quickly set up your phone. If you are not connected to the network, you will not have the ability to:

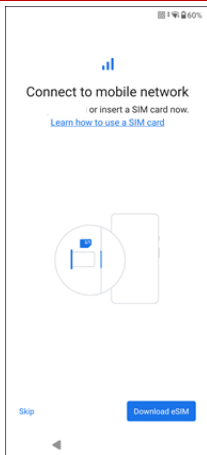

- Sign in to your Google account
- Restore apps & data
- Get software updates
- Automatically set up time and date

NOTE: Connect to the available Wi-Fi network to download the apps or copy data.

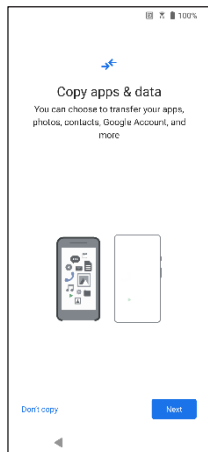

4. The **Connect to mobile network** screen appears.

- a. Please refer to your service provider's SIM setup instructions.
- b. Please see the quick start guide if you need to manually install the SIM card.
- c. If no action is needed, tap **Skip**.

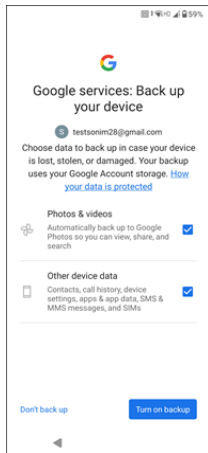

6. The **Copy apps & data screen** appears. You can copy your data from any of the following methods:

- A backup from an Android phone
- A backup from the cloud
- An iPhone® device
- If you do not wish to copy the data, tap **Don't copy**.

7. You can use different Google services. Tap on **More** to learn about the services.
8. By tapping on **Accept** you agree to the Google Terms of Services.

9. After adding your Google account. The following screen will appear, asking if you want to use Google services to back up your Photos & videos and/or Other device data. Make your selections to proceed.

10. For added security, set up a screen lock.
11. Follow the screen instructions to set up your backup screen lock method (PIN, Pattern, or Password).
 - a. If Fingerprint will be used, choose from the following combinations:
 - Fingerprint + Pattern
 - Fingerprint + PIN
 - Fingerprint + Password

IMPORTANT: When you reboot device, the fingerprint and face unlock will not work. You must use PIN or password to unlock the device for the first unlock. After the first unlock, the fingerprint or face unlock will function as expected.

12. Set up your fingerprint. The fingerprint sensor is on the power button. Locate the fingerprint sensor, and follow instructions by placing your finger on the sensor, and lift the finger after you feel a vibration. Tap on **Do it later** to perform this task later.
13. Now that the fingerprint has been added, you can use your fingerprint to unlock your phone or to approve any purchases. Tap on **Next** to proceed further.

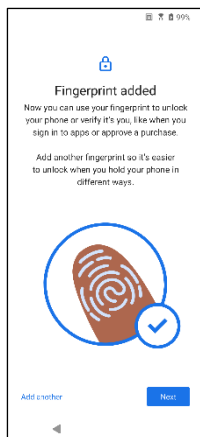

NOTE: Your fingerprint may be less secure than a strong pattern or PIN.

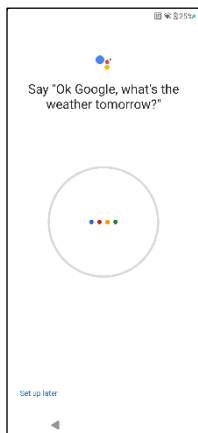

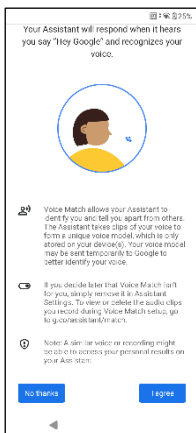

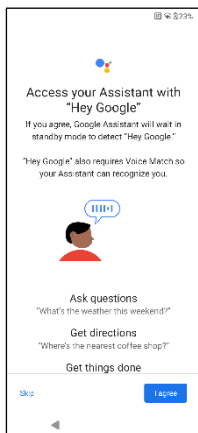

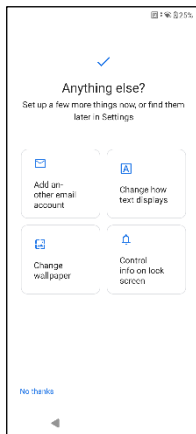

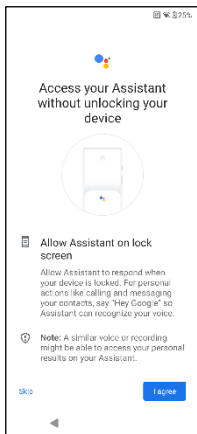

NOTE: You can add multiple fingerprints if multiple users use the same device.

- You can add another fingerprint by tapping on **Add another**. Otherwise, tap **Next**.

- 14.** The screens below are displayed after setting up the screen lock and fingerprint. Continue to make your selections at the bottom of each screen to complete the initial set up.

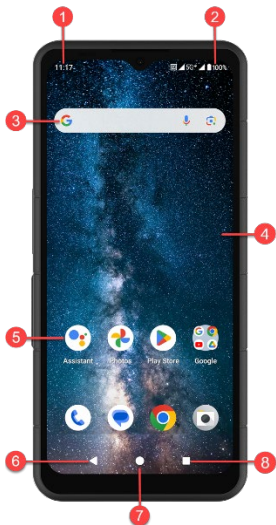

- You can also use the **Settings** menu to add another email account or set up other services.
- Tap on **No, thanks** to proceed to the Home Screen.

Managing The Home Screen

After you complete the phone setup, the home screen is displayed. The home screen is the beginning point to access all the device's features.

- 1. Notification Indicators
- 2. Status Indicators
- 3. Google Search Bar
- 4. Home Screen
- 5. Applications

- **Password:** When enabled, enter your own Password. When the phone is locked, unlock it using the password. When the phone screen is locked, you can answer an incoming call, without unlocking the screen.

Changing The Wallpaper

You can set an image or a photo stored in your phone as your home screen wallpaper. To change the wallpaper, select from one of the following Wallpaper collections.

Touch and hold an empty space on the Home screen, then tap **Wallpapers**. You can also access the Wallpapers menu from the Settings menu. From the home screen, swipe up and tap **Settings > Wallpapers**. Select the wallpaper from the following folders.

- **Live Wallpaper Picker**
- **Photos:** It includes photos and screenshots taken using the phone's camera.

(Default Sonim wallpaper is Black Paint Sponge wallpaper.)

- **Wallpaper & style:** Includes images that are pre-loaded with the phone.

GUIDELINE FOR HEADPHONE AND EARPHONE

To prevent potential hearing damage, please refrain from listening at high volume levels for extended periods.

Capturing A Screenshot

You can take an image of what is on your screen, and it will be stored in the Photos or Files app.

To take a screenshot:

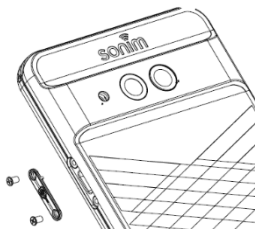

1. Ensure that the image to be captured is displayed on the current screen.
2. Press the **Power** and **Volume** down keys simultaneously. The screenshot is captured and stored in **Photos > Collections > Screenshots** OR **Files > Images > Screenshots**.

The SecureAudio™ Connector

The SecureAudio™ Connector is not a USB Type-C port. It is used for specific, compatible audio Push-to-Talk (PTT) accessories.

For USB Type-C connectivity, please refer to location #4 of the callouts at the beginning of the “[Using Your XP Pro E](#)” section above.

Please visit the Sonim Accessory store for examples of PTT accessories. <https://www.sonimtech.com/products/accessories>

SETTINGS MENU

Network & Internet

From the Home screen, swipe up to access App screen, scroll to and tap **Settings > Network & Internet**.

Wi-Fi

Wi-Fi is a wireless network technology that can provide Internet access at distance up to 100 feet, depending on the Wi-Fi router and surroundings.

You can access the Internet when you connect your XP Pro E to a Wi-Fi network. To connect your phone to a Wi-Fi network;

1. On the **Network & Internet** screen, tap **Internet**.
2. Turn **ON** Wi-Fi.
3. A list of Wi-Fi access points present within your phone's accessible range is displayed.
4. Select your preferred network. Enter the WEP/ WPS/WPA key (if it is a secured network) and select **Connect**. To verify the password before connecting, enable **Show password**.

NOTE: It is always recommended to make your Wi-Fi network connection secure and also to connect your phone to a secure network.

CONNECT TO NETWORK

1. On the Wi-Fi screen, tap any of the listed Wi-Fi access points displayed on your device. Enter the network password.
2. The other network setting details such as Advanced options, Proxy, IP settings can be updated.
3. Tap **Connect** to get connected to the network.

ADD NETWORK MANUALLY

1. On the Wi-Fi screen, tap **Add network**.
2. Enter the Network name and select **Security** from the drop-down list. You can set the network password.
3. Tap **Advanced options**. Settings, such as Proxy and IP, can be updated using the drop-down list.
4. Tap **Save** to save the network settings.

You can also join Wi-Fi by scanning a QR code. Tap the QR code icon () on the right side of **Add network**, and then scan the network QR code to join in.

FORGET NETWORK

1. On the Wi-Fi screen, tap the connected network.
2. Tap **FORGET**.

The selected network disconnects and appears in the Wi-Fi list.

If you need to connect to the same network, tap the network and enter the password.

MODIFY NETWORK

1. On the Wi-Fi screen, tap the **connected network**.
2. Tap () at the top right corner of the screen. You can change the network password. The other network setting details, such as Advanced options, Proxy, and IP settings, can be updated.
3. Select **Save** to save the changes.

NETWORK PREFERENCES

- On the Wi-Fi screen, tap **Network preferences**.
- **Turn on Wi-Fi automatically:** Wi-Fi will be turned on automatically when you are near high-quality saved networks, like your home network.
- **Notify for public networks:** Enable this option to get a notification when a high-quality public network is available.
- **Passpoint:** Seamlessly connect to Passpoint™ enabled Wi-Fi access points without needing a password.
- **Install certificates:** You can browse a certificate for installation.
- **Wi-Fi Direct:** Tap **Searching** to search for the peer devices, and also select **Rename device** to rename the device.

SAVED NETWORKS

On the Wi-Fi screen, tap **Saved networks** to view your saved Wi-Fi networks.

NON-CARRIER DATA USAGE

On the Wi-Fi screen, tap **Non-carrier data usage** to view the Wi-Fi data usage for each app.

Mobile Network

On the Network & Internet screen, tap **Internet**, then tap () on the right of a SIM carrier network.

Mobile data: Turn On to enable data access on your mobile network.

Roaming: Turn On to enable data roaming to connect to data services while roaming.

App data usage: View the mobile data usage of each app.

Data warning & limit: View the following data management options:

- **Mobile data usage cycle:** Set the date the usage cycle resets.
- **Set data warning:** Turn **On** to enable alerts when your mobile data usage reaches the amount set.
- **Data warning:** Set the data usage amount. Your phone will notify you when it reaches the amount set. Data usage measured by your phone is an approximate amount, and it may differ from the actual amount.
- **Set data limit:** Turn **On** to enable data limits.
- **Data limit:** Set a data limit. Your phone will turn off mobile data when it reaches the limit set.

Preferred network type: 5G is recommended; however, you can select LTE or 3G if you desire.

WI-FI CALLING

The default is ON. Turning this on your device can make and receive calls and send text messages via Wi-Fi networks or your carrier's network, depending on your preference and which signal is stronger. This service may require additional activation from your carrier and may also result in additional charges. Before activating, please contact your carrier.

NOTE: For those using TTY devices, they are not compatible with Wi-Fi Calling.

Automatically select network: The default is ON.

Access Point Names: The following options are available: select or add APNs, user controlled PLMN, Allow 2G, and Delete SIM.

SIMs

On the **Network & Internet** screen, tap **SIM Manager** for the following options:

- **SIM cards:** The phone accepts up to two SIM Cards. Tap on the SIM to explore additional management options for that SIM.

NOTE: When using multiple SIM cards, set a primary card (Preferred SIM card) to be used for calls, texts, and data.

Airplane Mode

When your phone is set to Airplane mode, network and mobile data connectivity are disabled; however, you can still access your camera, media files, and other features that do not require mobile data.

To activate Airplane mode:

1. On the Network & Internet screen, tap **Airplane mode**.
2. Turn **On** Airplane mode.

You can enable or disable Airplane mode directly in the Quick Settings Panel.

Hotspot & Tethering

Hotspot and Tethering provide Internet to other devices through your mobile data connection. Apps can also create a hotspot to share content with nearby devices.

On the Network & Internet screen, tap **Hotspot & Tethering**.

WI-FI HOTSPOT

The Mobile hotspot feature uses your mobile data plan when you are not connected to Wi-Fi.

1. On the Hotspot & tethering screen, tap **Wi-Fi hotspot**.
2. Turn On to enable the mobile hotspot.

When this option is disabled, you cannot share the Internet or content with other devices.

- **Hotspot name:** Set the hotspot name.
- **Security:** Select the desired security from the drop-down list.
- **Hotspot password:** The password must have at least eight (8) characters.
- **AP Band:** Select AP Band from the drop-down list.
- **Keep Mobile Hotspot on:** Set the timer for: Always, idle after 5, 10, 20, 40, or 60 minutes
- **Maximum connections:** Tap to set the maximum number of users allowed to connect to the hotspot.
- **Connected users:** View your connected users.
- **Help & Tips:** Instructions for using your phone as a mobile hotspot and sharing your mobile data with other Wi-Fi capable devices.

USB TETHERING

Using USB tethering, you can share your phone's internet connection via USB. To enable USB Tethering, connect the device to the PC using a USB cable. This feature will only be available when the XP Pro E is connected via USB to a compatible device.

1. On the Hotspot & tethering screen, tap **USB tethering**.
2. Turn **On** USB tethering.

BLUETOOTH TETHERING

You can share the phone's internet connection via Bluetooth. For sharing internet, you have to pair your Bluetooth with another device.

1. On Hotspot & tethering screen, tap Bluetooth tethering.
2. Turn **On** Bluetooth tethering.
3. Pair your Bluetooth device with another device.

Data Saver

Data usage refers to the amount of data your phone uses during internet data transfers. The data usage charges are dependent on the wireless plan provided by your service provider.

To monitor your data usage, adjust your data usage settings.

1. On the Network and Internet screen, tap **Data Saver**.
2. Turn **On** Data Saver.
3. Unrestricted data: Set apps to be allowed to use restricted data when Data saver is on.

VPN

1. On the **Network & Internet** screen, tap **VPN**.
2. Tap () at the top right corner of the screen to add a new VPN profile.
3. In the **Edit VPN profile** screen, enter the Name, Type (select from the drop-down list), and the server address.
4. Enter Username and password. Select **Save**.

Private DNS

1. On the Network & Internet screen, tap **Private DNS**.
2. Select your Private DNS mode.

Connected Devices

From the Home screen, swipe up to access the App screen, scroll to and tap **Settings > Connected devices** ().

Bluetooth

Bluetooth is a short-range wireless communication technology that allows you to connect to multiple Bluetooth devices, such as headsets, hands-free car kits, Bluetooth-enabled handhelds, computers, printers, and wireless phones. The communication range for Bluetooth is approximately 30 feet.

On the Connected devices screen, tap **Connection preferences > Bluetooth**.

PAIR NEW DEVICE

To activate Bluetooth and pair your XP Pro E device with other Bluetooth devices:

1. With Android 14, Bluetooth will automatically turn On when scanning for a new device.
2. Select the desired device from the list. It starts pairing with the selected device. A confirmation message is displayed to pair the device. Select **Pair**.

SONIM BLE

Sonim BLE (Bluetooth Low Energy) enables low-power connections with compatible devices. If your Bluetooth device supports Sonim BLE, you will need to follow these steps to complete the BLE process:

1. Refer to the Bluetooth section to pair your device.
2. Open Sonim Scout, then Utilities, then Sonim BLE Connect.

3. Ensure the device you want to pair with BLE is powered on and in pairing mode. The Sonim BLE app will search for available devices. If your device is not listed, you will be prompted to connect manually via the Sonim BLE Connect application.
4. The Sonim BLE Connect app will then display a connected status for those paired devices.

FORGET A BLUETOOTH DEVICE

1. On the Bluetooth screen, tap the Settings icon () next to the device you wish to forget.
2. Tap **Forget> Forget device**
3. The device will be unpaired from your phone. To reconnect with the device, you will need to pair again.

SEND INFORMATION VIA BLUETOOTH

You can use Bluetooth to transfer files between your phone and other Bluetooth-enabled devices, such as phones or computers. You can send photos, videos, calendar events, contacts, and more.

RECEIVE FILES

When another device attempts to send a file to your phone via Bluetooth, you will see a request to accept the file. Tap **Accept** to receive the file.

To view the files you've received via Bluetooth, tap Connection preferences > Files received via Bluetooth on the Connected devices screen.

USB

USB is a plug-and-play interface that allows a computer to communicate with peripherals and other devices.

On the **Connected devices screen**, tap **USB**. You can use USB for the following tasks:

- **File Transfer:** Tap this option to transfer the data from one device to another.
- **USB tethering:** Select to set the USB tethering mode.
- **MIDI:** Musical Instrument Digital Interface (MIDI). Select to enable the phone to act as a digital interface for connecting musical instruments and other devices. NFC

NFC (Near-Field Communication) is a set of communication protocols that enable two electronic devices, typically a portable device such as a smartphone, to establish communication by bringing them within 4 cm of each other.

NFC is turned ON by default.

1. On the Connected Devices screen, tap **Connection Preferences > NFC**. Select **Enable** prompt for NFC, which will alert you when an NFC card is nearby.

2. To set up Contactless payments, click **Contactless payments** from the NFC page and follow the prompts to set up your payment methods.

Cast

1. On the Connected devices screen, tap **Connection preferences > Cast**.
2. You can cast your screen from your Android device. Connect your Android device to the same Wi-Fi network as your Chromecast or TV with Chromecast built-in. In the top left corner of the app's Home screen, tap **Menu Cast Screen > Audio Cast Screen > Audio**.
3. Ensure that your Android device and Chromecast are connected to the same Wi-Fi network.
4. Tap (⋮) on the top right corner of the screen and **check Enable wireless display** to view a list of nearby devices you can cast to.

NOTE: When you connect the Sonim XP Pro E phone to a computer, it appears as a drive rather than a device.

Printing

1. On the Connected devices screen, tap **Connection preferences > Printing**.
2. Tap **Default Print Service**. Turn **On** the default print service.
3. Tap **Add service**. The Google Play screen is displayed. You can sign in with your Google credentials and add any desired service.

Chromebook

You can use your phone to unlock your Chromebook screen and send and receive text messages on it.

1. On the Connected devices screen, tap **Connection preferences > Chromebook**.
2. Tap the drop-down list to view the Gmail accounts that are configured on your device.

Quick Share

Quick Share enables the rapid, short-range exchange of images, videos, text, contact information, directions, YouTube videos, and other data via Bluetooth.

1. On the Connected devices screen, tap Connection preferences > **Quick Share**.
2. Turn **On** the **Quick Share**. You can enable or disable the Quick Share feature directly in the Quick Settings Panel.

For more information on Quick Share, please visit support.google.com

Android Auto

Use the Android Auto app to control your phone's maps, media, and messaging functions, with the Google Assistant, while you drive.

1. On the Connected devices screen, tap Connection preferences > **Android Auto**.
2. Before using, please visit the Google Play Store and ensure you have the latest version installed on your device.

Apps

2. Turn **On** this option to allow temporarily snoozing certain notifications.

Notification Dot On App Icon

The default setting is enabled. This option lets you display notification dots on an app icon to alert you to new notifications.

Enhanced Notifications

Enhanced notifications can access notification content, including personal information like contact names and messages. This feature can also dismiss or respond to notifications, such as answering phone calls, and controls Do Not Disturb.

The default setting is Enabled. This option automatically shows suggested actions and replies.

Battery Settings

From the Home screen, swipe up to access the App screen, scroll to and tap **Settings > Battery** (). The current battery percentage and the estimated remaining charge time (in days and hours) are shown.

Battery Usage

View battery usage from the last full charge.

1. On the Battery screen, tap **Battery usage**.
2. You can view the battery percentage that each app uses.

Battery Saver

Battery Saver mode turns on the Dark theme and limits or turns off background activity, some visual effects, certain features, and some network connections.

On the Battery screen, tap **Battery Saver**.

- **Use Battery Saver:** Turning this setting ON will enable the Battery Saver mode, and it will automatically turn off when the phone is plugged in.
- **Set a schedule:** Tap **Based on percentage** (Min Settings 5%, Max Settings 75%) and drag the slider to the percentage you desire. The Battery Saver will turn on automatically when your phone reaches that battery percentage.
- **Turn off at 90%:** This option is enabled by default. While this setting is enabled, the Battery Saver feature will turn off when the battery reaches 90%.

Battery Percentage

The default setting is enabled. While this setting is enabled, the battery percentage will show in the Status bar.

Reduce Battery Aging

This feature is **OFF** by default. When enabled, it limits battery charging to 80% capacity, which helps extend your battery's overall lifespan. This is beneficial for any situation where your device remains connected to a power source for extended periods, such as when using desk chargers, nightstand chargers, or vehicle mounts. Your phone will occasionally charge to 100% to ensure accurate battery capacity readings.

To activate this feature, go to **Settings > Battery > Reduce Battery Aging**.

USB Power Saving

You can enable specific settings relative to USB charging.

- **Automatic power ON:** The default setting is OFF; however, enabling this feature will automatically power your device on when a USB device is connected.

You also have two options related to powering your device OFF when tied to USB charging:

- **Automatic power OFF:** The default setting is OFF; however, enabling this feature allows you to set a specific time for your device to power off.
- **Automatic power OFF:** The default setting is OFF; however, enabling this feature allows you to set the time (in hours) after which your device will power off when disconnected from USB power.

Battery Health

- **Manufacture date:** Date the battery was manufactured, represented by month and year.
- **First usage:** Date the battery was first used, represented by month and year.
- **Fully charged cycles:** This is the number of times the device has used the battery capacity.
- **Maximum capacity:** The maximum capacity is an estimate of your device's current battery capacity compared to when it was new. A lower percentage means less usage time between charges. **Battery endurance:** A minimum of 1000 full charged cycles. After 1000 full charge cycles, the battery has, in a fully charged state, a remaining capacity of at least 80% of the rated capacity.

For more information on battery performance, storage & charging, please refer to the section, "[Battery Info](#)" on page 117.

Storage Settings

The Storage settings menu lets you manage internal storage on your phone and includes options for an optional SD card (not included).

From the Home screen, swipe up to access the App screen, scroll to and tap **Settings > Storage** ().

SD Card

You must have an SD card inserted to manage settings.

1. On the **Storage** screen, tap () > **SD Card** to view files stored on your SD card.
2. Tap () on the top right corner of the screen to access the following options:
 - **Rename:** change the SD card name.
 - **Eject:** eject the SD card to allow for safe removal.

Location Settings

From the Home screen, swipe up to access the App screen, scroll to and tap **Settings > Location** (📍).

- Turn **On** location services.

RECENT ACCESS

View a list of apps that have recently requested your location.

App Location Permissions

View which apps have permission to access location services and at what level: Allowed all the time, Allowed only while in use, and Not allowed.

Location Services

Earthquake alerts: The default setting is ON; you will receive an alert with the initial estimated magnitude and distance from your location. Alerts are managed by Google.

Emergency Location Service: Turn On Google ELS.

If ELS is supported in your region, when you contact an emergency number, your device may automatically send its location to emergency responders using ELS.

Google Location Accuracy: Turn On this option to use GPS, Wi-Fi, Bluetooth, mobile networks, and sensors to determine your location.

Google Location History: Default is ON; Saves where you go with your device, even when you aren't using a specific Google service.

Google Location Sharing: Default is OFF; Location Sharing lets you share your real-time location from your device with people you choose.

Trusted places: This feature requires a screen lock. Some settings use trusted places to determine when more security is needed. For example, when your device is away from your trusted locations, such as your home or office, some settings may require additional steps to verify that it's you.

Wi-Fi scanning: Turn On this option to improve location services by allowing the system apps and services to detect Wi-Fi networks at any time.

Bluetooth scanning: Turn On this option to improve location services by allowing the system apps and services to detect Bluetooth devices at any time.

Safety & Emergency

USING APPLICATIONS

Camera

The Sonim XP Pro features a 50MP primary rear camera and a 16MP front camera with fixed focus for capturing images. Saved pictures can be accessed via the Photos app or by clicking the gallery button in the lower-left corner of the screen.

From the Home screen, swipe up to access the App screen, and tap the **Camera** app.

- **Camera mode:** Tap the soft key in the bottom center of the screen to take a photo. Use the Volume Up and Volume Down keys as alternative capture keys.
- **Continuous Shot mode:** Press and hold the Volume Up or Volume Down key to activate Continuous Shot mode, which captures up to 20 pictures in rapid succession. Releasing the button at any point during the long press will end the continuous mode shooting.

When you activate the camera, you will see a series of options along the lower edge of the screen above the camera soft key. These options are:

Pro

Several professional settings are available for you to adjust picture-taking parameters manually. You can adapt any of the following:

- Manual focus
- ISO
- Shutter speed
- Exposure
- White Balance
- Auto focus

Night

This mode reduces noise and sharpens details for low-light photography. Keep your phone still when taking photos.

Video

You will have access to Beauty & Filter settings, as well as an Auto Zoom setting (0.6x, 1x, or 2x).

Photo

You will have access to Beauty & Filter settings, as well as an Auto Zoom setting (0.6x, 1x, or 2x).

Portrait

For best “bokeh” (or blur) effects, keep a distance of 0.5-1.5 meters between your phone and the subject.

50M and More

- Panorama
- AR Sticker
- Watermark
- Time-lapse
- QR Code
- Macro

Just below these “modes,” there are three buttons that support your photo/video efforts.

Gallery soft key is the soft button on the left side of the screen. This will give you access to all photos and videos stored on your device.

Camera Soft key is the button you use to take a picture or to start and stop a video.

Mirror Soft key is the button used to flip the front camera, allowing you to take a selfie. This feature does not work with the rear camera.

Utilize the following features when in Camera mode. These are the

icons along the top of the screen when in Camera mode.

NOTE: These descriptions apply to the camera app installed on the Sonim XP Pro E. If you are using a different camera, these descriptors may differ.

These icons are seen at the top of the screen from left to right:

FLASH: Tap the Flash icon to toggle flash. If the flash icon is orange, it is activated; if the icon has a slash through it, the flash is deactivated; if the icon has a small “a” in the bottom-right corner, it is in Automatic mode.

HDR (High Dynamic Range): Tap the HDR icon to enable or disable HDR. If the HDR icon is orange, it is activated; if the icon has a slash through it, the flash is deactivated; if the icon has a small “a” in the bottom right, it is in Automatic mode.

AI: Tap the AI icon to activate or deactivate auto scene detection.

Google Lens: Tap the Google Lens icon to activate Google Lens. When active, use your camera to snap a picture, and Google will provide a description (where available) of the image in your shot.

MOTION PLAY

Enable or disable this Google Camera feature to capture photos with creative blur effects.

SETTINGS

Picture Size: Ability to adjust the size while in **Pro** or **Photo** modes.

- 1.2MP (1:1)
- 13MP (4:3)
- 8MP (16:9)
- 7MP (Full screen)

Shutter Sound: It can turn on or off.

QR Code recognition

Geotagging: When enabled, it records coordinates where pictures are taken. Details are available in the image details.

Camera Screen Brightness:

- Minimum brightness
- Normal
- Maximum brightness

Volume Key Functions: While the default is to capture a shot, including Continuous Shot mode, you can set the volume key to operate as follows when the camera is engaged:

- Volume
- Capture
- Zoom

Self-Timer: Can set the self-timer to any of the following options:

- Off
- 3 seconds
- 5 seconds
- 10 seconds
- 15 seconds

Touch Shot: Enabling this feature lets you capture a photo by touching anywhere on the touchscreen.

NOTE: This does NOT work when in video mode.

Face Detection: Enable this feature to automatically detect and track a face, keeping it in focus as you move the camera.

Watermark: This Google Camera feature lets you add a time, device, and/or location watermark.

To create a custom watermark, select **device watermark**. This custom watermark can contain up to 16 characters, including letters, numbers, and special characters.

NOTE: Emojis cannot be used in your custom watermark.

Grid: Enable this feature to overlay a grid on the screen, helping you align your image before taking a photo or video.

Video: Ability to adjust the video parameters while in the **video** mode.

- Video frame rate: Select 30FPS or 60FPS.
- Video quality: Select High, Medium, or Low.

Smile capture: Turn on this feature to snap a photo whenever the camera detects a smile, while in the **Photo** mode.

Advanced Features:

- **Anti-Flicker:** Select from Auto, Off, 50 Hz, or 60 Hz settings.
- **Correct ultra-wide angle distortion:** Enable or disable.

Restore Default Settings: This option restores all settings to their factory defaults.

Calendar

The Calendar helps you set up appointments, schedule reminders and alerts, and repeat them as needed. You can also view your saved tasks on a daily or weekly basis.

To access your calendar:

1. From the App screen, tap **Calendar** ().
2. To change the calendar view, tap **Option** () and you can view the calendar in:
 - **Schedule**,
 - **Day**,
 - **3 Days**,
 - **Week**, and
 - **Month** format.

To schedule an event or a task, tap the “+” button on the lower right side of the screen, and then tap either Task or Event and follow the prompts.

To view events on your calendar, ensure they are selected for display. Go to Settings by clicking on the three lines in the upper left-hand corner of your device. Scroll to the bottom and tap **Settings** (). Follow the prompts to select which activities and calendars you want synced to your phone.

Calculator

The default calculator on this phone is designed to perform basic mathematical operations.

1. To access the calculator, from the App screen, tap **Calculator** ().
2. To enter numbers, tap the respective numeric soft keys.
3. To perform your calculations, touch the respective operation soft keys on the screen.

For more mathematical operators, tap the “v” soft key above the division soft key on the right side of the screen.

Within the Calculator app, there is a **Settings** menu. From here, you can gain access to:

- **History:** You can get a list of previous calculations you have performed on the device.
- **Choose theme:** You can choose a light, dark, or system default theme.
- You can access Google’s Privacy Policy as well as send Google feedback on their application and access the Google help menu.

Clock

To access the Clock, from the App screen, scroll to and tap

Clock (). The following features are available:

Alarm

- To schedule a new Alarm, Tap **Alarm** (), then tap the “+” button and set the specific time of your alarm.
- You can then add a label, select the frequency of the alarm, set the tone, whether you want it to vibrate, whether you

wish to add this alarm to your Google Assistant Routine, or delete the alarm.

Clock

- The clock automatically displays the current time for your location by using data from the nearest connected cell tower.
- To check the time in other cities around the world, tap the “+” button and start typing the first few letters of a city’s name. A list of city options will appear based on your input. Select the cities you want, and they will be added to the Clock screen for easy viewing.
- If you want to remove a city from the Clock screen, swipe left on the city name, and it will be deleted.

Timer

- Set the desired timer and press the round **Play** key at the bottom center of your screen.
- You will then be able to pause, add 1 minute to the timer, or create another timer. You can add as many timers as you like.

Stopwatch

To start the Stopwatch, press the **start** () button on your screen. You have options to restart (left soft key) or create a split (right soft key)

Bedtime

Setting Up Your Sleep Routine.

- Set a Regular Wake-Up Alarm
 - Choose a consistent wake-up time to start your day.
 - If you prefer a gentler wake-up, enable the **Sunrise Alarm** feature. This gradually brightens your screen before the alarm activates.

- **Customize Alarm Settings**
 - Select a preferred alarm tone to wake up to.
 - Enable or disable vibration based on your preference.
 - Add the alarm to your **Google Assistant Routine** to seamlessly integrate it with your daily tasks.
- **Set Up Bedtime Notifications**
 - Configure a consistent bedtime to help you develop a healthy sleep pattern.
 - Enable **Bedtime Notifications** to remind you to prepare for sleep. You can choose when to receive notifications—15 minutes, 30 minutes, 45 minutes, or 1 hour before your set bedtime. You can also disable notifications if you prefer no reminders.
- **Enable Bedtime Mode**
 - Turn on **Bedtime Mode** to minimize distractions and create a sleep-friendly environment. When enabled:
 - Your phone will automatically silence notifications.
 - The wallpaper will dim.
 - The display will switch to black and white to reduce screen stimulation.
 - You can customize **Bedtime Mode** to allow specific people, alarms, or notifications to bypass these settings for essential communication.
- **Additional Tips for Better Sleep**
 - Disconnect from your device as you approach bedtime.
 - Listen to soothing sounds to relax and prepare for a restful night.

To access Clock settings directly from the Clock application, tap the three dots in the upper-right-hand corner of your screen.

The following tools are available:

Screensaver: You will enable the screensaver when you access this screen.

Settings:

- Clock Settings:
 - Style: Digital or Analog
 - Display time with seconds: on or off
 - Automatic home clock: Enabling this feature allows you to have a 2nd clock for when you are traveling in an area outside of your home time zone, displaying the correct time at your home.
 - Home time zone: Use this to set your official home time zone
 - Change date & time: Use this to adjust the date & time manually.

ALARM SETTINGS

Silence after: Set the time to cancel the alarm sound after a specific duration. Options are:

- 1 minute
- 5 minutes
- 10 minutes
- 15 minutes
- 20 minutes
- 25 minutes, or
- Never

Snooze after: Set the time to snooze after you silence your alarm. Options are from 1 minute to 30 minutes.

You can also:

- Adjust the volume of your alarm
- Gradually increase the volume of your alarm from 5 seconds to 60 seconds (in 5-second increments)
- Set the volume buttons, when tied to an alarm, to control volume, snooze, stop the alarm, or do nothing.
- Set what day of the week your calendar starts. Options are Sunday, Friday, Saturday, or Monday.

TIMER SETTINGS

You can customize the timer:

- Select the sound used by the Timer, or add your own sound.
- Gradually increase the sound of your timer counter from 5 seconds to 60 seconds (in 5-second increments).
- Enable or disable the Timer vibrate feature.

Screen Saver

You can customize the screen saver:

- Set a digital or analog screen saver
- Activate Night Mode to decrease the display to a very dim setting to decrease the impact on your eyes in dark rooms.

Privacy Policy

This will take you to the Google Privacy Policy.

Help

This will take you to the Google Help resources. Popular topics will be listed on the main screen; however, you can use the search window to search the entire Google help database.

Send feedback

This link lets you provide feedback directly to Google.

Sound Recorder

You can record voice memos using the device's sound recorder.

1. To access the sound recorder, from the **App** screen, tap **Sound Recorder**.
2. To record an audio file, tap the red record button located in the bottom center of the screen.
3. To STOP the recording, press the STOP soft key on the bottom left side of the screen.
4. To PAUSE the recording, press the PAUSE soft key in the bottom center of the screen.

Once you have stopped the recording, you will be prompted to save the recording with a file name. You can use the prepopulated file name or create one of your own.

- Press SAVE when you have named the file.
- Once you have saved audio files to the device, you will see the MENU soft key brighten (it is dark and inactive on the screen when no audio files are present). Press this to see the list of audio files saved to your device, and tap any file to play it.

Sound Recorder Settings Menu: view specific attributes of sound recordings or set custom values such as BitRate, SampleRate, Channel, and Codec by tapping the checkbox next to Custom Settings in the upper-left corner of the screen.

Files

Files stored on your phone (e.g., photos, videos, screenshots, recordings, documents) can be viewed, edited, deleted, and shared using Files. If you are using an external storage SD card, you can also manage those files from your device.

From the **App** screen, tap **Files**. You will see:

- **Recent** files are listed and grouped at the top of the screen.
- Collections include files you have marked as Favorites (Starred) and a Safe Folder.
- **Categories** of files appear below the Recent files. These include:
 - Downloads
 - Images
 - Videos
 - Audio
 - Documents
 - Apps
- **Collections** include files you have marked as Favorites (Starred) and a Safe Folder.

IMPORTANT: Files stored in the Safe Folder are protected by a lock (either PIN or Pattern). If you forget this lock (password), there is no way to recover it, and these files will be lost. **Please protect your lock code. Neither Google nor Sonim can recover this lock code for you or reset it without a factory reset, which would delete all folders within this Safe Folder.**

- **All Storage** devices appear at the bottom of the screen, which includes internal storage and other storage options.

Battery Info

Model: BAT-05000-21S

Battery Usage

Your Sonim XP Pro E phone has a non-removable battery. If you have any battery-related questions, please contact the Sonim Customer Experience Center at 1-833-MY-SONIM (1-833-697-6646) or email us at globalsupport@sonimtech.com.

- Use only a Sonim XP Pro E (X802) certified battery that is designed for this phone model.
- The use of other batteries may cause permanent damage to your device, thus voiding the warranty.
- It is recommended to protect the phone and battery from extreme temperature environments and moisture.
- Please keep the battery out of the reach of children

Verifying And Optimizing Battery Usage

- You can check the battery usage status and close some applications to save battery power. From the Home screen, swipe up to access the App screen, tap on **Settings** () > **Battery** ().
- The current battery level (charging or not charging) is displayed at the top of the screen. From the Home screen, swipe up to access the App screen, tap on **Settings** () > **Battery** (). Tap on **Battery usage** to view the discharge graph, which shows the battery level over time since you last charged the device, how long you have been running on battery power, and approximately how much battery life you have left.
- The list at the bottom of the screen shows the breakdown of battery usage for individual apps and services. Touch any

listed items for more details. The details screen in some apps includes buttons to adjust settings that affect power usage or to stop the application completely.

- If you Force Stop an application, it may affect not only the overall performance of that application but also the device's performance. If you notice any performance issues, power-cycle the device.

Tips To Extend The Battery Life

- Follow these tips to extend your phone's battery life.
- If you are not using Wi-Fi, Bluetooth, or GPS, use the Settings to turn them off. The GPS setting is located in **Settings > Location**.
- Set screen brightness to Low and set a shorter Sleep timeout (15 seconds). The display settings are located in **Settings > Display**.
- If you are traveling and do not have access to mobile data or a Wi-Fi network, switch to Airplane mode. Select Airplane mode from Quick Settings.

Charging The Battery

- We recommend that you give your device a full charge before you use it for the first time.
- The ambient temperature during charging shall be in the range 0°C to 45°C (32°F to 113°F)
- Only the power supplies with outputs meeting the SELV requirements can be used for charging. The maximum allowable input voltage for the phone is 9V and 2A.
- There is a risk of explosion while charging if the battery has been replaced with an incorrect type.
- If the battery is completely out of charge, it can take several

minutes for the charging icon to appear when the charger is connected.

Properly Charging The Device

1. Insert the charger

Insert the charger plug into a power outlet

2. Connect to the phone

The charging port is located at the bottom of the phone and is covered by the rubber charging port cap.

- i. Open the charging port cap.
- ii. Insert the charging connector.

Charging Animation/Icon

- If the battery is charged when the phone is switched off, a battery charging animation with the current battery level is displayed.
 - After the battery is fully charged, the charging animation stops, and the battery level displays 100%.
 - Please disconnect the charger from the phone.
- If the battery is charged while the phone is switched on, the battery icon on the status bar shows the lightning bolt, indicating that the battery is being charged.
 - After the battery is fully charged, the display shows “100%” next to the battery.
 - Please disconnect the charger from the phone. Once unplugged, the battery icon will return to a solid image.

Storing Your Phone and Battery

If you plan to store your phone (which includes the non-removable battery) for an extended time, please follow the recommendations below to ensure long battery life and minimize battery self-discharge:

- Charge your battery to a level between 40% and 60%.
- Protect the battery terminals to avoid discoloration and potential short circuits with other battery terminals.
- Store the phone in a dry, cool environment that is free from vibration.
- If you use a climate-controlled storage location, set the temperature to 59° to 77°F (15° to 25°C) and keep the relative humidity $\leq 85\%$ RH.
- Recharge the battery once every 6 months using a USB power adapter and a charging cable with a USB Type-C connection.

WARNING! Never charge, plug in, or unplug your phone when in an inherently unsafe environment (i.e., combustible or explosive atmospheres caused by flammable gases or fumes, dust, etc.).

Safety Guidelines

Please read and understand the following safety guidelines before you use the phone. These guidelines provide details to help you use your phone safely and comply with applicable legal requirements for cellular phone use.

	Observe restrictions when using radio equipment at fuel depots, chemical plants, or where blasting operations are in progress.
	Electrical interference may interfere with your phone's use. Observe restrictions in hospitals and near medical equipment.
	Switch off your cellular phone when in an aircraft. Wireless phones can cause interference or pose a safety risk to an aircraft. In an aircraft, the phone can be used in Airplane mode.
	Do not expose the device to temperatures exceeding 55°C (131°F).
	Adhere to road safety laws. Do not hold/ use a phone while you are driving; find a safe place to stop first. Use a hands-free microphone while you are driving.
	Avoid using the phone in close proximity to personal medical devices, such as pacemakers and hearing aids.
	Use only Sonim Model-approved charging equipment to charge your phone; doing so helps prevent damage.
	Ensure that only qualified personnel install or repair your phone.

The Sonim XP Pro E is waterproof and can be submerged to a depth of up to 6.56 Feet (2 meters) of fresh or salt water for 1 hour.

Ensure that the audio connector door is closed correctly. This prevents water droplets from forming on the connectors when the phone is submerged in water.

Water droplets may condense under the display cover if the phone is immersed in water and the ambient temperature drops significantly. This does not indicate water leakage. The droplets will disappear at room temperature.

The Sonim XP Pro E is dust-resistant, rugged, and shock-resistant. However, it is not dust-proof or unbreakable if subjected to overwhelming impact. For optimal results and extended product life, it is recommended to protect the Sonim XP Pro E from salt water, dust, and strong impacts.

Avoid High Temperatures

Leaving the device in hot or cold environments, such as a closed car in summer or winter, reduces the battery's capacity and lifespan. For optimal results, use the device within the temperature range of -20°C to +55°C (-4°F to 131°F). A device with a hot or cold battery may temporarily stop working, even when the battery is fully charged. Battery performance is particularly limited in temperatures well below freezing.

Personal Medical Devices

Mobile phones can interfere with the operation of cardiac pacemakers and other implanted medical devices. Please avoid placing your mobile phone over a pacemaker, for example, in your breast pocket. When using a mobile phone, hold it against the ear opposite the pacemaker.

Maintaining a minimum distance of 15 cm (6 inches) between the mobile phone and the pacemaker limits the risk of interference. If you suspect interference, immediately turn off your mobile phone. Contact your cardiologist for more information. For other medical devices, consult your physician and the device's manufacturer. Comply with instructions to switch off the device or deactivate the RF transmitter when required, especially when posted in hospitals

and airplanes. Equipment used in these places may be sensitive to radio waves emitted by the device and may adversely affect its operation.

Also, observe restrictions at gas stations or in other areas with flammable atmospheres, or when near electro-explosive devices.

Child Safety

Do not allow children to play with your mobile phone or its accessories. Keep it out of their reach. They could hurt themselves or others, or could accidentally damage the mobile phone or its accessories. Your mobile phone and its accessories may contain small parts that could detach and create a choking hazard.

Battery Usage Safety

- Risk of explosion if the battery is replaced with an incorrect type.
- Dispose of used batteries according to the instructions.
- Do not disassemble or open, crush, bend or deform, puncture or shred.
- Do not modify or re-manufacture, attempt to insert foreign objects into the battery, immerse or expose to water or other liquids, or expose to fire, explosion, or other hazard.
- Only use the battery with a charging system that the system has qualified according to the CTIA Certification Requirements for Battery Systems Compliant with IEEE 1725. Using an unqualified battery or charger may pose a risk of fire, explosion,

leakage, or other hazards.

- Do not short-circuit a battery or allow metallic conductive objects to contact battery terminals.
- Battery usage by children should be supervised.
- Avoid dropping the phone or battery. If the phone or battery is dropped, especially on a hard surface, and the user suspects damage, take it to a service center for inspection.
- Improper battery use may result in a fire, explosion, or other hazard.

WARNING! Do not replace an embedded (non-removable) battery pack. Improper replacement may pose risks of fire, explosion, leakage, or other hazards. Contact the manufacturer for a replacement. The device recognizes the battery via battery ID.

ECO Warning

The symbol of the crossed-out wheeled bin indicates that this product, and any enhancements marked with this symbol, cannot be disposed of as unsorted waste but must be taken to separate collection for end-of-life disposal.

Audio Device Warning

To prevent possible hearing damage, please do not listen at high volume levels for long periods.

Emergency Calls

Mobile phones operate using radio signals, which cannot guarantee a connection under all conditions. Therefore, you should never rely solely on any mobile phone for essential communications, such as medical emergencies.

Emergency calls may not be possible in all areas, on all cellular networks, or when certain network services and/ or mobile phone features are in use. Check with your local service provider.

USA and Canada Market

USA market FCC INTERFERENCE STATEMENT

This mobile phone complies with part 15 of the FCC Rules.

Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

This mobile phone has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult with the dealer or an experienced radio or TV technician for assistance.

FCC NOTE

Caution: Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

USA market FCC RF EXPOSURE INFORMATION (SAR)

This device is designed and manufactured not to exceed the emission limits for exposure to radio frequency (RF) energy set by the Federal Communications Commission of the U.S. Government.

The exposure standard for wireless device employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6W/ kg. *Tests for SAR are conducted using standard operating positions accepted by the FCC with the device transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the device while operating can be well below the maximum value. This is because the device is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output.

- when tested for use at the head is 1.20 W/kg
- when worn on the body, as described in this user guide, is 1.20 W/kg (Body-worn measurements differ among device models, depending upon available accessories and FCC requirements.)

While there may be differences between the SAR levels of various devices and at various positions, they all meet the government requirement.

The FCC has granted an Equipment Authorization for this model device with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. SAR information on this model device is on file

with the FCC and can be found under the Display Grant section of www.fcc.gov/oet/ea/fccid after searching on FCC ID: WYPS3111

For body worn operation, this device has been tested and meets the FCC RF exposure guidelines for use with an accessory that contains no metal and be positioned a minimum of 10 mm from the body. When the device is set to hotspot mode, please use it at least 10 mm away from your body. Use of other accessories may not ensure compliance with FCC RF exposure guidelines.

This phone is designed and manufactured not to exceed the emission limits for exposure to radio frequency (RF) energy set by the Federal Communications Commission of the United States.

Canadian market IC Radiation Exposure Statement(SAR)

This equipment complies with ISED radiation exposure limits set forth for an uncontrolled environment. End users must follow the specific operating instructions for satisfying RF exposure compliance. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

The portable device is designed to meet the requirements for exposure to radio waves established by the ISED. These requirements set a SAR limit of 1.6 W/kg averaged over one gram of tissue. The highest SAR value reported under this standard during product certification for use when properly worn on the body & head. This equipment should be installed and operated with minimum distance 1.0 cm between the radiator and your body.

These requirements set a SAR limit of 4 W/kg averaged over ten grams of tissue. The highest SAR value reported under this standard during product certification for use when properly worn on the limbs.

Cet équipement est conforme aux limites d'exposition aux rayonnements

ISED établies pour un environnement non contrôlé. L'utilisateur final doit suivre les instructions d'utilisation spécifiques pour satisfaire la conformité à l'exposition RF. Cet émetteur ne doit pas être co-situé ou fonctionner conjointement avec une autre antenne ou émetteur.

L'appareil portable est conçu pour répondre aux exigences d'exposition aux ondes radio établies par l'ISED. Ces exigences fixent une limite de SAR de 1,6 W/kg en moyenne sur un gramme de tissu. La valeur SAR la plus élevée déclarée en vertu de cette norme lors de la certification du produit pour une utilisation lorsqu'elle est portée correctement sur le corps et la tête. Cet appareil doit être installé et utilisé avec une distance minimale de 1.0 cm entre l'émetteur et votre corps.

Ces exigences fixent une limite de SAR de 4 W/kg en moyenne sur dix grammes de tissu. La valeur SAR la plus élevée déclarée en vertu de cette norme lors de la certification du produit pour une utilisation lorsqu'elle est correctement portée sur les membres.

- Devices shall not be used for control of or communications with unmanned aircraft systems.
- Devices shall not be used on oil platforms.
- Les dispositifs ne doivent pas être utilisés pour le contrôle ou les communications avec les systèmes d'aéronef sans pilote.
- Les dispositifs ne doivent pas être utilisés sur les plates-formes pétrolières.

Devices shall not be used on aircraft, except for the low-power indoor access points, indoor subordinate devices, low-power client devices, and very low-power devices operating in the 5925-6425 MHz band, that may be used on large aircraft as defined in the Canadian Aviation Regulations, while flying above 3,048 metres (10,000 feet).

Les dispositifs ne doivent pas être utilisés à bord des aéronefs, sauf pour les points d'accès intérieurs à faible puissance, les dispositifs subalternes intérieurs, les dispositifs clients à faible puissance et les dispositifs à très faible puissance fonctionnant dans la bande de 5925 à 6425 MHz, qui peuvent être utilisés sur les gros aéronefs au sens du règlement de l'aviation canadien, alors qu'ils volent à plus de 3048 mètres (10 000 pieds). Devices shall not be used on automobiles.

- Devices shall not be used on trains.
- Devices shall not be used on maritime vessels.
- Les dispositifs ne doivent pas être utilisés sur les automobiles. Les dispositifs ne doivent pas être utilisés sur les trains.
- Les dispositifs ne doivent pas être utilisés sur les navires maritimes.

The device for operation in the band 5150–5250 MHz is only for indoor use to reduce the potential for harmful interference to co-channel mobile satellite systems.

L'appareil pour fonctionner dans la bande 5150-5250 MHz est uniquement pour une utilisation à l'intérieur pour réduire le potentiel d'interférence nuisible aux systèmes satellites mobiles co-canaux.

**Hearing Aid Compatibility*

This phone is hearing aid compatible as determined by ANSI C63.19-2019.

This phone has been tested and certified for use with hearing aids for some of the wireless technologies that it uses. However, some newer wireless technologies used in this phone may not have been tested yet for compatibility with hearing aids. It is important to thoroughly test the various features of this phone in different locations, using your hearing aid or cochlear implant, to determine if you experience any interfering noise. Consult your service provider or the manufacturer of this phone for information on hearing aid compatibility. If you have questions about return or exchange policies, please consult your service provider or contact the retailer directly.

The ANSI C63.19-2019 standard does not use the M/T rating system for showing the hearing aid compatibility with the phone that older version of the standard used; instead, the 2019 version of the standard uses the conversational gains for the phone's hearing aid compatible capabilities.

The volume control performance has been evaluated according to ANSI C63.19-2019 and waiver DA-23-914. The lowest conversational gain is 6.0 dB with a hearing aid, and 10.9 dB without a hearing aid.

The table below shows the wireless technologies (including frequencies/bands by air interface and codec) that are tested or not tested according to FCC rules and limited waiver DA23-914:

Air Interface	Bands	Codec	HAC		
			RF	T-Coil	Volume control

<p>(1) The UNII-5 is tested for Hearing Aid Compatibility for operations which are entirely below 6 GHz. Above 6 GHz is not tested due to outside of the current scope of ANSI C63.19 and FCC HAC regulations.</p> <p>(2) According to FCC waiver DA 23-914, Hearing Aid compatibility only partially tested for the conversational gain.</p>

RED compliance

The device is compliance with Directive 2014/53/EU, please visit www.sonimtech.com Radiation Exposure Statement(SAR)

This device meets applicable international safety requirements for exposure to radio waves. The mobile device is a radio transmitter and receiver. It is designed not to exceed the limits for exposure to radio waves (radio frequency electromagnetic fields) recommended by international guidelines from the independent scientific organization ICNIRP (International Commission of Non-Ionizing Radiation Protection). The radio wave exposure guidelines use a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit for mobile devices is 2.0 W/kg averaged over 10 grams of tissue and includes a substantial safety margin designed to assure the safety of all persons, regardless of age and health.

Tests for SAR are conducted using standard operating positions with the device transmitting at its highest certified power level in all tested frequency bands. The highest SAR values under the ICNIRP guidelines for this device model are:

Test Position	Test value	Test distance	Limit
Head	1.552 W/kg	0 mm	2.0 W/kg
Body	1.571 W/kg	5 mm	2.0 W/kg
Limb	3.232 W/kg	00 mm	4.0 W/kg

WiFi warning

The device is restricted to indoor use only when operating in the 5250 to 5350 MHz, 5945 to 6425MHz (WiFi 6E LPI) frequency range.

ECO 1670 Regulation Requirements

1. Manufacturers, importers, or authorized representatives shall provide in the technical documentation and make publicly available on free-access websites of the manufacturer, importer, or authorized representative the following information:
 - a. Compatibility with removable memory cards, if any;
-- **See the section topic “[Insert a MicroSD card](#)” on page 11.**
 - b. Indicative weight range of the following critical raw materials and environmentally relevant materials:
 - i. cobalt in the battery (weight range: less than 2 g, between 2 g and 10 g, above 10 g);
-- **Above 10g**
 - ii. tantalum in capacitors (weight range: less than 0,01 g, between 0,01 g and 0,1 g, above 0,1 g); -- **0g**
 - iii. neodymium in loud speakers, vibration motors, and other magnets (weight range: less than 0,05 g, between 0,05 g and 0,2 g, above 0,2 g); -- **Between 0.05g and 0.2g**
 - iv. gold in all components (weight range: less than 0,02 g, between 0,02 g and 0,05 g, above 0,05 g). -- **Between 0.02g and 0.05g**
 - c. The indicative value of the recyclability rate R_{cyc} ;
-- **Recyclability rate: 90.4% (for XP Pro E).**
 - d. The indicative percentage of recycled content for the product or a part thereof, where available; if not available, the recycled content should be indicated as “not known” or “not available”;
-- **Not known.**
 - e. Ingress protection rating; -- **See the section topic “[Durable Design](#)” on page 2.**
 - f. Minimum battery endurance in cycles in number of cycles; -. --
See the section sub-topic “[Battery Health](#)” on page 46.
2. Manufacturers, importers, or authorized representatives shall provide user instructions in the form of a user manual on a free access website of the manufacturer, importer, or authorized representative, and shall include:
 - a. How to access on the device information from the battery

management system on: -- **See the section topic "[Battery Health](#)" on page 46.**

- i. date of manufacturing of the battery;
 - ii. date of first use of the battery after the set-up of the device by the first user;
 - iii. number of full charge/discharge cycles (reference: rated capacity);
 - iv. measured state of health (remaining full charge capacity relative to the rated capacity in %);
- b. Instructions for battery maintenance, including the following:
- i. impacts on battery lifetime related to exposure of the device to elevated temperatures, suboptimal charging patterns, fast charging, and other known adverse factors; -- **See the section topic "[Charging the Battery](#)" on page 8, and the section "[Battery Info](#)" on page 117.**
 - ii. effects of switching off radio connections, such as Wi-Fi, Bluetooth, on power consumption; -- **See the section "[Tips To Extend The Battery Life](#)" on page 118.**
 - iii. information about whether the device supports other features, which extend battery lifetime, such as smart charging, and about how these features are activated or under which conditions they work best. -- **See the section topic "[Battery Settings](#)" on page 44.**
- c. Where the package does not include a charger, the user instructions referred to in point 2 shall include the following information: "For environmental reasons this package does not include a charger. This device can be powered with most USB power adapters and a cable with USB Type-C plug.". -- **See the section topic "[What's in the box?](#)" on page 2.**
